

# Trace a torso: the heart and lungs

● Trace each rectangle and the drawings they contain onto tracing paper. Cut the rectangles out. Put the body together correctly by placing the sheets on top of each other.

- Find out:
- What protects the heart and lungs?

\_\_\_\_\_

- Why does the muscle in the wall of the heart contract regularly?

\_\_\_\_\_

- Add to the drawings. Label the brain, lungs and any organ you can name to which the heart pumps blood.
